(54) Title: CONTROL SYSTEM COMPRISING MEANS FOR SETTING UP A SHORT DISTANCE SECOND DATA TRANSMITTING CONNECTION TO A WIRELESS COMMUNICATION DEVICE IN ORDER TO SEND AN IDENTIFICATION MESSAGE

(57) Abstract: The invention relates to a control system which comprises at least means (IR2) for setting up a short distance wireless second data transmission connection (CH2) to a wireless communication device (MS) when it is within said distance, the connection being arranged at least for transmitting an identification message (MSG1) to said communication device, the message containing data (ID1) for identifying said control system (SS); means (RF2, TE2) for receiving messages via a communication channel (CC1, CC2, CC3) from a mobile communication network (PLMN) which is arranged to set up a wireless first data transmission connection (CH1) to said communication device for the transmission of messages, and which mobile communication network also comprises authentication means (AC) for identifying said communication device and for allowing the transmission of messages, and processing means (CTRL2) at least for interpreting a control message (MSG2) transmitted from said communication device and received via the communication channel, the message containing at least data (CMD) for controlling the control system in a desired manner.
